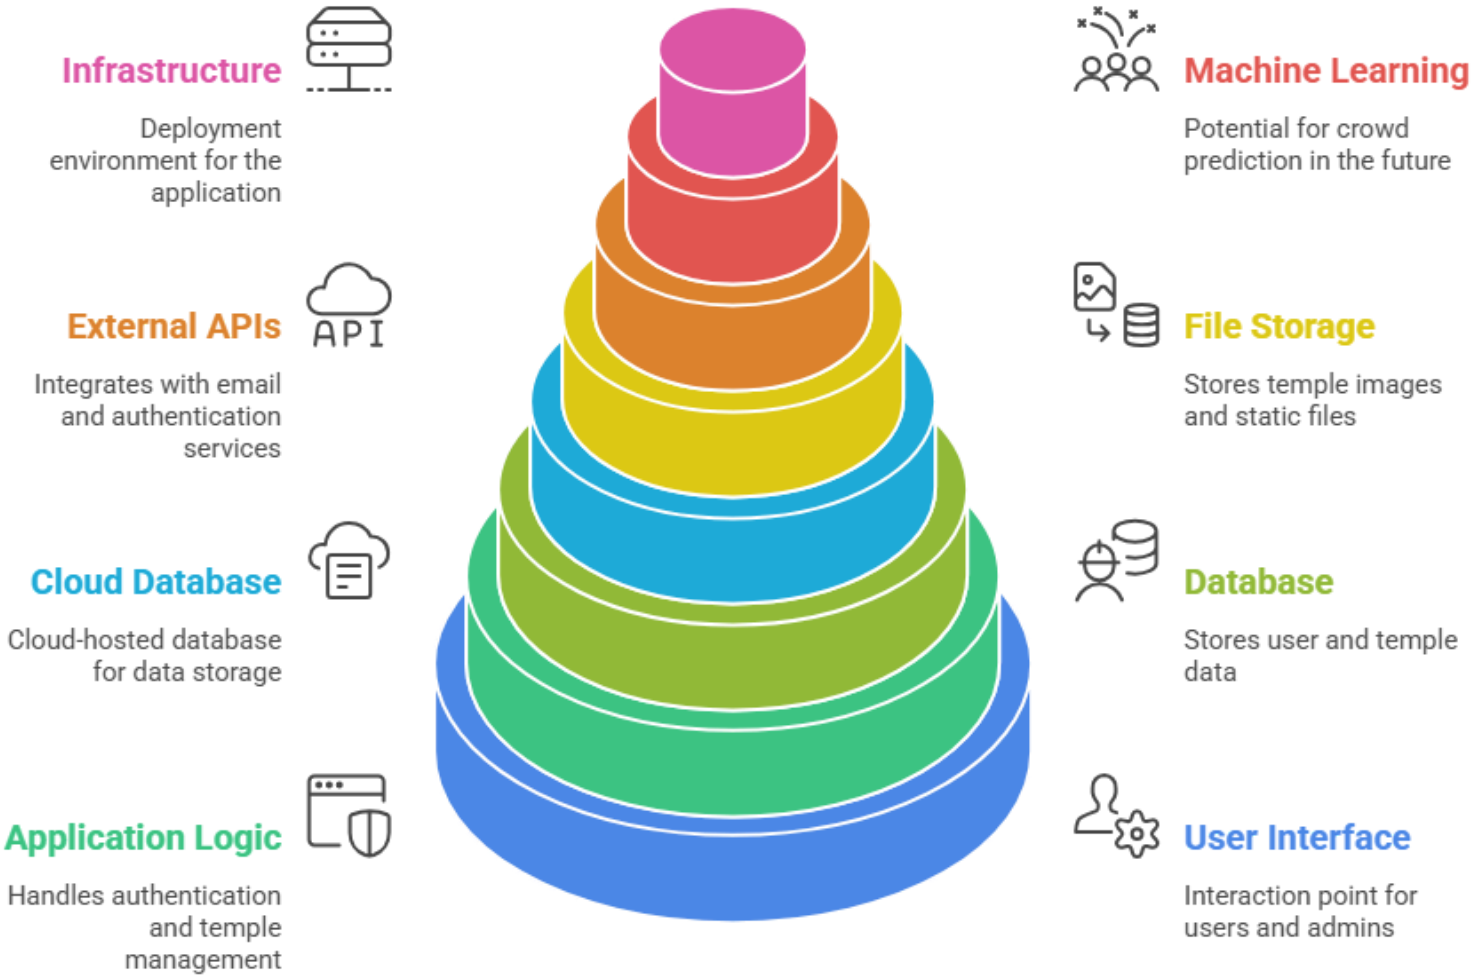
Temple Management System Architecture



Application Components and Technologies

Component	Description	Technology
User Interface	User interaction point	HTML, CSS, JavaScript, Bootstrap
Application Logic-1	Handles user authentication	Node.js, Express.js
Application Logic-2	Manages temple information	Node.js REST API
Application Logic-3	Processes booking requests	Node.js with Express Controllers
Database	Stores application data	MongoDB
Cloud Database	Cloud hosted database	MongoDB Atlas
File Storage	Stores temple images	Local File System / Cloud Storage
External API-1	Email notification	NodeMailer / Email API
External API-2	Authentication or OTP verification	Firebase OTP / Authentication API
Machine Learning Model	Crowd prediction	N/A
Infrastructure	Application deployment environment	Local Server / Node.js Server / Cloud

Application Characteristics

Performance

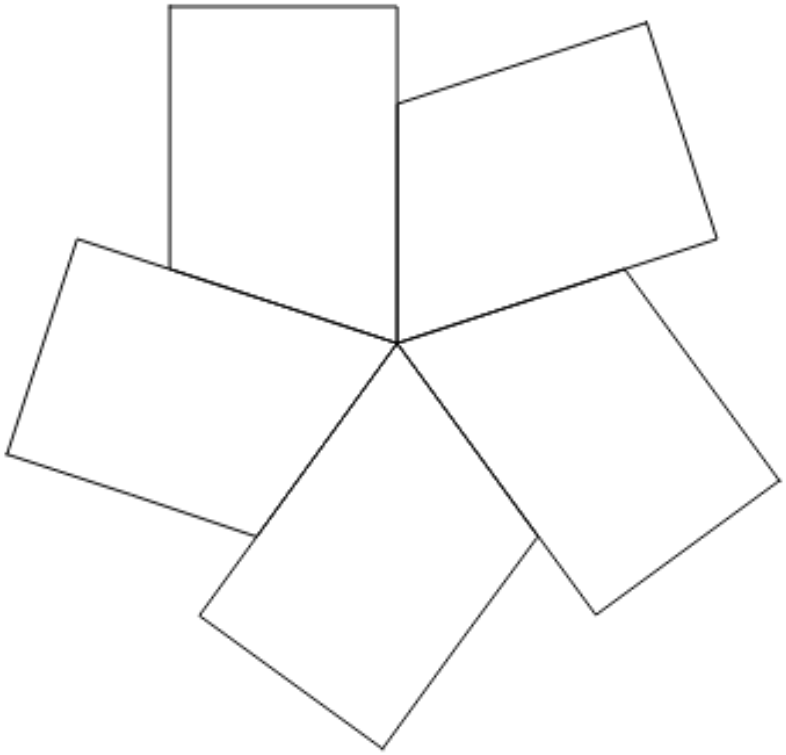
Improves application performance and faster response time. API Optimization, MongoDB Indexing, Caching.

Availability

Ensures application availability through reliable hosting. Cloud Hosting, Database Replication.

Scalable Architecture

Three-tier architecture separating frontend, backend, and database. 3-Tier Architecture (Client-Server-Database).



Open-Source Frameworks

Frameworks used for application development. Node.js, Express.js, Bootstrap.

Security Implementations

Protects user data and authentication. JWT Authentication, Password Hashing using bcrypt, HTTPS.
